

# USING THE CERAMIC KNIFE SAFELY

The slice knife uses 'cutting edge' ceramic technology. The ceramic blade does not feel sharp and is far less likely to cut skin by accident. The ceramic blade lasts many times longer than a metal type blade.

## **Safety points:**

- Ask the teacher if you are allowed to use the ceramic knife.
- Always wear safety glasses when using tools.
- Use a cutting mat and safety ruler to make straight cuts.
- Always cut away from your hand and body when using the knife.
- Make sure you know who or what is behind the cardboard when cutting out holes or shapes.
- Keep your work area clean and tidy.
- Close and put away the tool safely after use.
