

USING THE SCREWDRIVERS SAFELY

The plastic screws can connect several layers of cardboard using the stubby screwdriver.

Safety points:

- Only use the supplied Number 2 Pozidrive™ screwdrivers with the nylon screws.
- Create a 'pilot hole' using the metal point of the screw eye to make it easier to start the screw going into the cardboard.
- Don't stab the cardboard with the screwdriver.
- Check what is behind what you are joining.
